St. Georgen, April 2010

The existing product line of Grässlin's room thermostats has been enhanced by further four thermostats. An attractive and flat design of the surface mounting devices matches perfectly to modern architectural requirements. Thermio 603, 703 and 713 are equipped with a big, manageable adjustment interface such as a knob or push button for comfortable and simple use. Adjusted temperature values as well as current room temperature are shown on a well-arranged display with a blue backlight.

Thermio 603, 703 and 713 have been developed to control heating or cooling appliances with a temperature adjustment range of + 5 C° - + 35 C°. Additionally thermio 713 offers the possibility to control a fan speed at the same time. Depending on the installation requests it's possible to choose either between battery powered devices or mains powered ones.

Apart from the existing thermostats, thermio Touch has a significant big oversized display, also back-lighted, offering heat regulation by simply using the touch screen to increase or decrease the desired temperature value on a scale from + 5 C° till + 35 C°. Thermio Touch also has an external input which you can use to set the temperature into a reduced level, especially for the night time. Depending on certain needs, a remote volt-free switch like a time switch, door / window contact or movement detector can be used to decrease the set temperature by 3 C° to avoid unessential energy consumption.

The status of the controlled appliances can be checked easily by looking at clear and understandable icons on the displays, so the user will note very quickly if the system is running or not.

About Grässlin:

Since June 2007, Grässlin GmbH belongs to Intermatic Inc. The Headquarters is being in Spring Grove, Illinois, USA. For more than 118 years Intermatic has been one of the leading manufacturers of high quality energy control products and professional lighting solutions.

Grässlin was founded in 1956. Over the years it has developed into an international leading supplier in the field of time switch technology, light- and temperature control.
